Abstract (Basic): JP 10329964 A

NOVELTY - Sheets of paper (21,21a) delivered by a delivery unit are contacted by a predetermined pressure. A gate roller (35) displaces the contacted papers, by the reaction force. A discriminator judges normal or abnormal papers based on the waveform output from a detector which detects the physical quantity of paper. When the output waveform exceeds a predetermined level, the discriminator judges an abnormal paper and the delivery of paper is stopped.

USE - For image readers such as copier.

ADVANTAGE - Distinguishes condition of paper reliably. Employs suitable process to deliver sheets of paper. DESCRIPTION OF DRAWING(S)
- The figure shows the block diagram of the internal structure of the paper sheet delivery apparatus. (21,21a) Sheets of paper; (35) Gate roller.
